Slate File Marks

A crafted logo set for popular files · draft 1 · 28 October 2026

Zig, the reference mark

How the marks are built

1 **16-unit grid.**
Every mark is drawn for the 14 pt file tree first and scales up cleanly; strokes are about 1.5 units, so they stay over a pixel wide.

2 **One path, one colour.**
Each mark is a single SVG path filled with the nonzero rule, which is exactly what gooey's renderer draws, so the paths go into Slate unchanged.

3 **Knockouts, not outlines.**
Letters and details are cut out of a solid shape. They stay legible when small and turn into white-on-colour for the tab logo.

4 **Recognisable, not copied.**
Each mark keeps the cue people already know (Rust's cog, Python's two snakes, Lua's moon, Go's speed lines) and redraws it on our grid.

The set: 27 marks

The set

Zig

#F0A020 .zig .zon

Z inside open brackets; the slash runs past them.

 build.zig 

Rust

#C6512B .rs Cargo.toml

Ten-tooth cog with a knocked-out R.

 main.rs 

Go

#00A5CF .go go.mod

Italic GO with three speed lines.

 server.go 

Python

#3776AB .py .pyi

Two interlocked snakes, each with an eye.

 app.py 

JavaScript

#E9C319 .js .mjs .cjs

Yellow tile, JS set bottom-right.

 index.js 

TypeScript

#3178C6 .ts .mts .d.ts

Blue tile, TS set bottom-right.

 types.ts 

React

#149ECA .jsx .tsx

Three orbits around a nucleus.

 Button.tsx 

Vue

#41B883 .vue

Two nested Vs.

 App.vue 

C

#5C6BC0 .c .h

Hexagon with an open C.

 parser.c 

C++

#00599C .cpp .cc .hpp

Hexagon, C and two plus signs.

 engine.cpp 

C#

#9B4F96 .cs

Hexagon, C and a sharp.

 Program.cs 

Swift

#F05138 .swift

Swift bird diving across a rounded tile.

 View.swift 

Java

#E76F00 .java .jar

Steaming cup on a saucer.

 Main.java 

Kotlin

#7F52FF .kt .kts

Square with a notch cut to its centre.

 Build.kt 

Ruby

#CC342D .rb Gemfile

Cut gem with facet lines.

 app.rb 

The set

PHP

#777BB4 .php

Oval with a cut-out php.

index.php

Lua

#2C2D72 .lua

Planet, its shadow and a moon.

init.lua

Shell

#3E9F55 .sh .bash .zsh

Prompt >_ in a terminal tile.

install.sh

HTML

#E34F26 .html .htm

Shield with a 5.

index.html

CSS

#1572B6 .css .scss

Shield with a 3.

style.css

JSON

#B8901A .json .jsonc

A pair of curly braces.

package.json

YAML

#CB171E .yaml .yml

Y and the colon of key: value.

ci.yml

TOML

#9C4121 .toml

T between square brackets.

Cargo.toml

Markdown

#4A5A78 .md .mdx

M and a down arrow in a frame.

README.md

SQL

#D9822B .sql .sqlite

A database cylinder of three discs.

schema.sql

Docker

#2496ED Dockerfile

Whale carrying a stack of containers.

Dockerfile

Git

#F05032 .gitignore

Branch graph inside a diamond.

.gitignore

Notes

Files without a language keep today's Lucide icons: images, archives, fonts, audio, video and lockfiles stay grey, so the coloured marks point at the code.

Every mark here is generated from design/marks.py; the same path strings go into src/file_kind.zig once the set is approved, drawn filled in the tree and quick open and in white on the tile in the tab bar.

Ask for changes by name, e.g. "Ruby: fewer facets" or "YAML: try a list instead".

In context

Actual size, in Slate's light theme: the tree, the tab bar and quick open.
